## **Partner agreement entered by Univeyor Logistics Systems and Logimatic**

Effective on 1 May 2009, a partner agreement has been entered by Univeyor Logistics Systems (ULS) and Logimatic, meaning that ULS outsources its activities related to the control software “UniControl” to Logimatic. Through this partner agreement, ULS strengthens its software competences and also provides the best possible launchpad for continued development and optimization of ULS’ product line and associated software.

### **Efficient control concept**

Over the past years, ULS has developed the UniControl concept when engineering system supplies. The UniControl has proven its worth as an efficient software concept for the control of warehouses and logistics systems. ULS has now chosen Logimatic to secure the future development of the UniControl software – Logimatic has an organization of software specialists and the required “critical mass” of competences to ensure the best possible customer support and continued software development.

### **Improved customer service**

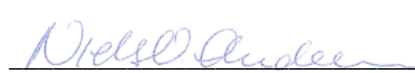

The partner agreement means that Logimatic will continue and strengthen the software activities in a larger software organization, thereby contributing to improved support and upgrade potential for all existing ULS customers.

Existing customers will feel no difference since hotline calls will still be made to Univeyor Logistics Systems, with subsequent support from Logimatic. At the same time, this cooperation is an opportunity to offer a wider range of services adapted to the customers’ actual needs.

Should you require any further information, please do not hesitate to contact us or your usual ULS contact person.

We look forward to our continued cooperation.

Kind regards,

Niels Otto Andersen  
Univeyor Logistics Systems

Karsten Bangshaab
