

Powerful, patented and universal technology

The Qubiqa Layer Picker® employs patented differential suction technology for safe and gentle product lifting. Based on a low-vacuum chamber principle with no suction cups, the system can handle more than 98% of products in retail distribution - including many products traditionally considered unsuitable for automated handling. The Layer Picker® gives our customers the crucial flexibility to meet future demands.

Advantages

- High system capacity (from 170 to more than 300 layers per hour)
- Cost-effective and labor saving (only one person needed)
- Optimal picking and order quality Short payback time
- Handles all known pallet types
- Temperature range from -27°C to 40°C
- Intelligent control
- Reliable operation
- Easy maintenance
- Universal picking provides a flexible and future-proof system
- Compact and easy integration into existing buildings
- Easy to operate
- MORE THAN 130 LAYER PICKER APPLICATIONS SOLD WORLD WIDE
