QUBISTORE improves all warehouse operations - thus improves competitiveness

Qubiq's mini load systems meet today's increasing demands for fast and flawless picking, capacity and flexibility. QUBISTORE is our standard solution for small and medium stock keeping companies, which includes the same advantages as our regular mini-load systems. These systems are being used by a number of large companies and distribution centers that are all known for ultimate requirements for delivery, reliability and accuracy.

Qubistore is a complete solution including conveyors as well as picking and packing stations

Qubistore comes with a complete mini-load system including ergonomic and functional picking and packing stations, conveyors and operating system with Windows graphic user interface and connectivity to the customer's ERP system. Our mini-load systems may optionally be supplied with a wide variety of retrievers that are suitable for traditional storage boxes and cartons.

Main benefits

- Goods to operator rather than operator to goods: ensures top ergonomics and safety
- High capacity and 60-70% space saving compared to traditional warehousing
- 4-5 times faster with error-free picking for greater delivery reliability and service
- Operational savings (man hours) offer a short payback time
- Simple and effective inventory management with user friendly features / complete overview
- Continuous and automatic counting of inventory / status
- Protection against theft from warehouse
- Possibility of full service management agreement

Picking is controlled via simple and intuitive graphic screen images with indication of which location the box is to be picked from. Tilting of the box ensures good ergonomics.

The warehouse crane which runs in the aisles between the boxes, automatically retrieves boxes from the shelves. Here is a special double retriever that delivers boxes for picking.
